

Noor Ahmed

Full Stack Web Developer

Over 1 year of professional experience designing and developing dynamic, responsive web applications using modern JavaScript (ES6+), React.js, and CSS. I pair clean, maintainable front-end code—leveraging reusable components with Hooks and Context API with robust back-end services built on Django and Django REST Framework.

WORK EXPERIENCE

Full Stack Developer

Young Dev

07/2024 - 12/2024

Responsibilities

- **Core JavaScript Development:** Utilized ES6+ syntax (let/const, arrow functions, template literals, destructuring) to write clean, maintainable code.
- **DOM Manipulation & Events:** Implemented dynamic UI behavior by interacting with the DOM (querySelector, classList) and handling user events (click, input, scroll).
- **Asynchronous Programming:** Managed data flows using Promises, async/await, and the Fetch API complete with proper loading and error states.
- **React Component Architecture:** Built reusable functional components with Hooks (useState, useEffect, useContext) to encapsulate UI logic.
- **State Management:** Leveraged Context API (and Redux when needed) to maintain predictable global state flows.
- **Responsive Design & CSS Techniques:** Combined Flexbox, CSS Grid, media queries, and JS-driven class toggles for layouts that adapt seamlessly to all devices.
- **Version Control & Collaboration:** Managed branches, pull requests, and merge conflicts via Git/GitHub in Agile sprints.
- **DJANGO Back-End Development:** Developed back-end features using Django, handling routing, models, and views for web and API logic.
- **REST API Design:** Built and tested RESTful APIs using Django REST Framework to serve data securely and efficiently to the front end.
- **Serialization & Auth:** Implemented serializers, viewsets, and token-based authentication to structure and protect API endpoints.

EDUCATION

BS Information Engineering Technology

University of Lahore

09/2022 - Present

SKILLS

JavaScript

React JS

CSS

Python

Django

MySQL

Flutter

Networking

HTML

Git Version Control

AWS

Docker

PROJECTS

1)Offline Web Store

2)Tic Tac Toe

3)Hospital Management System C++

3)Voice Control Car (Embedded System)

4)Digital Smart Room

CERTIFICATES

1)CISCO IOT

2)CISCO Cyber Security

3)CISCO Packet Tracer

4)Google Ads Measurement

5)YoungDev
